

48.3mm Diameter Galvanised Scaffold Tube for Construction Support System

Basic Information

- Place of Origin: China
- Brand Name: Bythai Scaffolding
- Certification: SGS
- Model Number: BT01
- Price: \$5-\$18
- Packaging Details: In bundles
- Delivery Time: 7-15 days
- Payment Terms: TT/LC
- Supply Ability: 1000tons per month

Product Specification

- Standard: EN39
- Material: Galvanised Steel
- Diameter: 48.3mm
- Weight: 6.4kg/m
- Surface Treatment: Galvanised
- Thickness: 3.2mm
- Application: Scaffolding
- Name: Galvanised Scaffold Tube

Product Description

Product Description:

Galvanised Scaffold Tube - Product Overview

The Galvanised Scaffold Tube is a high-quality, durable and corrosion-resistant tube used in construction and building projects. This tube is specially designed for use in tube scaffolding systems and is an essential component in the construction industry.

Key Product Attributes:

Diameter: 48.3mm

Material: Galvanised Steel

Tensile Strength: 420N/mm2

Standard: EN39

Yield Strength: 245N/mm2

Tube Scaffolding

The Galvanised Scaffold Tube is specifically designed for use in tube scaffolding systems. It is a vital component in the construction of temporary structures such as scaffolds, which are used to support workers and materials during building projects.

Durable and Corrosion-Resistant

The Galvanised Scaffold Tube is made from high-quality galvanised steel, making it extremely durable and resistant to corrosion. This ensures that the tube can withstand harsh weather conditions and can be used for both indoor and outdoor construction projects.

High Tensile Strength

The Galvanised Scaffold Tube has a high tensile strength of 420N/mm2, making it strong enough to support heavy loads and provide a stable working platform for construction workers. This strength is essential in ensuring the safety and stability of the scaffold structure.

EN39 Standard

The Galvanised Scaffold Tube meets the EN39 standard, which is a European standard for steel tubes used in scaffolding. This standard ensures that the tube meets specific requirements for dimensions, mechanical properties, and chemical composition, making it a reliable and trustworthy product for construction projects.

Versatile Use

The Galvanised Scaffold Tube is not only used in construction projects but also has a wide range of other applications. It is commonly used in the film and television industry, as well as for lighting and sound equipment in events and concerts. It can also be used in DIY projects and home renovations.

Conclusion

The Galvanised Scaffold Tube is an essential product in the construction industry, providing a strong, durable, and corrosion-resistant solution for tube scaffolding systems. Its high tensile strength, EN39 standard, and versatile use make it a reliable and efficient choice for any construction project.

Technical Parameters:

Product Name	Galvanised Scaffold Tube
Application	Scaffolding
Material	Galvanised Steel
Standard	EN39
Diameter	48.3mm
Thickness	3.2mm
Weight	6.4kg/m
Tensile Strength	420N/mm2
Yield Strength	245N/mm2
Surface Treatment	Galvanised
Key Features	Product Information
Scaffolding tube price	Competitive
Hot dip galvanized scaffolding steel tube	Galvanised for added durability and corrosion resistance
BS1139 scaffolding tube	Compliant with British Standard for scaffolding materials

Applications:

Galvanised Scaffold Tube - Bythai Scaffolding

Brand Name: Bythai Scaffolding

Model Number: BT01

Place of Origin: China

Certification: SGS

Price: \$5-\$18

Packaging Details: In bundles
Delivery Time: 7-15 days
Payment Terms: TT/LC
Supply Ability: 1000tons per month
Application

The Galvanised Scaffold Tube, also known as hot dip galvanized scaffolding steel tube, is a versatile product that is widely used in various construction sites. It is an essential component of scaffolding, providing a strong and stable support structure for workers and materials.

Material and Diameter

Made from high-quality galvanised steel, the Galvanised Scaffold Tube has a standard diameter of 48.3mm, making it compatible with most scaffolding systems and components.

Standard and Certification

The Galvanised Scaffold Tube meets the European standard EN39, ensuring its quality and safety. It is also certified by the reputable SGS, giving customers peace of mind when using the product.

Usage Scenario

The Galvanised Scaffold Tube is commonly used in various building and construction projects, such as high-rise buildings, bridges, and stadiums. It is also suitable for smaller scale projects, such as home renovations and maintenance works.

Safety and Durability

The hot dip galvanization process used to coat the scaffold tube provides it with excellent corrosion resistance, making it suitable for both indoor and outdoor use. This feature also ensures the tube's durability, making it a cost-effective choice in the long run.

Versatility and Affordability

The Galvanised Scaffold Tube is highly versatile, allowing it to be used for various purposes like support for workers, materials, and even as a temporary handrail. It is also an affordable option, making it accessible for both small and large-scale construction projects.

High Load Capacity and Easy Assembly

With its sturdy galvanised steel construction, the Galvanised Scaffold Tube has a high load capacity, making it suitable for heavy-duty applications. It is also designed for easy assembly, saving both time and effort during the construction process.

Modular Design and Adjustable Height

The Galvanised Scaffold Tube has a modular design, allowing it to be easily connected with other scaffolding components, such as couplers and frames. This feature makes it highly flexible and adaptable to various construction needs. Additionally, its adjustable height feature allows for easy customization to fit different building heights and designs.

Conclusion

The Galvanised Scaffold Tube by Bythai Scaffolding is a reliable and essential product for any construction project. With its high-quality material, safety certifications, and versatile features, it is the go-to choice for building support structures. Its affordability, durability, and easy assembly make it a popular and practical choice for construction companies and DIY enthusiasts alike.

Customization:

Galvanised Scaffold Tube - Customized Service

Brand Name: **Bythai Scaffolding**

Model Number: **BT01**

Place of Origin: **China**

Certification: **SGS**

Price: **\$5-\$18**

Packaging Details: **In bundles**

Delivery Time: **7-15 days**

Payment Terms: **TT/LC**

Supply Ability: **1000tons per month**

Name: **Galvanised Scaffold Tube**

Weight: **6.4kg/m**

Surface Treatment: **Galvanised**

Application: **Scaffolding**

Yield Strength: **245N/mm2**

This Galvanised Scaffold Tube is a type of tube and coupler scaffolding, made with galvanized pipe for maximum durability and corrosion resistance. It is a critical component in scaffolding systems, used for supporting workers and materials at construction sites or other industrial projects.

At Bythai Scaffolding, we offer customized services for our Galvanised Scaffold Tube to meet the specific needs of our customers. We understand that each project may have unique requirements, and we are committed to providing the best solution to our clients.

Our Galvanised Scaffold Tube comes with a brand name of Bythai Scaffolding, ensuring the highest quality standards. It is model number BT01 and is manufactured in China, certified by SGS. The price range for our product is between \$5-\$18, making it affordable for different budget needs.

For packaging, we bundle our Galvanised Scaffold Tubes for easy transportation and storage. Our delivery time is between 7-15 days, and we accept payment terms of TT/LC for convenience. With a supply ability of 1000 tons per month, we can cater to bulk orders and meet tight deadlines.

The Galvanised Scaffold Tube weighs 6.4kg/m and has a yield strength of 245N/mm2, making it a strong and reliable choice for scaffolding applications. It also has a surface treatment of galvanization, providing long-lasting protection against rust and corrosion.

In conclusion, Bythai Scaffolding offers top-quality Galvanised Scaffold Tube with customized services to meet the individual needs of our customers. Trust us for all your scaffolding needs and experience the best in terms of quality, reliability, and service.

Packing and Shipping:

Galvanised Scaffold Tube Packaging and Shipping

The Galvanised Scaffold Tube is carefully packaged to ensure safe delivery to our customers. It is packed in bundles, with each bundle wrapped in plastic and then secured with steel bands. This packaging method helps to protect the tubes from damage during transportation.

For smaller orders, the tubes are packed in strong cardboard boxes with foam inserts for added protection.

For shipping, we use reputable couriers and freight companies to deliver the tubes to our customers. We also offer the option of express shipping for urgent orders.

Once the tubes are shipped, we provide our customers with a tracking number so they can monitor the status of their order.
